Engineer and explorer seeking an ambitious team to build, as much as evolve, biological industrial design

Work Experience

Odyssey SpaceWorks, Cofounder/Head of Science (2022-present) Build and operate an automated R&D facility in low Earth orbit for life sciences - made one small satellite at a time. Our lab modules apply supervised biological work and permissioned evolution during spaceflight. First mission to launch October 2023.

RoosterBio, Bioprocessing Application Scientist (2021-2022) Accelerate human mesenchymal stromal cell product and process development. Collaborate with academics and industry to leverage a well-defined cellular therapy product line for scalable regenerative medicine cures.

Universities Space Research Association, contracted to NASA Ames Research Center Scientist + Synthetic Biology Task Lead (2017-2020) Biological industrial design to outfit human missions to space. Built biotechnology alongside evolutionary and synthetic biologists to reverse engineer life from extreme environments. Projects included: Digitizing a sea sponge to 3D-print a living filter; a portable device to make protein-based drugs; and field work in Antarctica.

Massachusetts Institute of Technology, Senseable City Lab, Postdoctoral Fellow (2015-2017) A partially anonymized public health census using biology, data, and civic infrastructure. As part of the Underworlds team, I automated wastewater sampling to measure the bacteria, virus, and chemicals in different neighborhoods. Our geolocated dataset became a heatmap of human health and consumption. Instances of the technology were deployed in Boston and Kuwait. The project has become the company BioBot Analytics.

Drexel University, Mechanical Engineering Department Research Fellow / PhD Candidate (2009-2014) Developed manufacturing processes to build a model of human liver for space flight medicine. Used scaffold-guided tissue engineering to reproduce the anatomical, multi-cell type structure of hepatic tissue. In collaboration with NASA Johnson Space Center, we used the 3D-printed model to measure drug toxicity in space-like environments.

Inventions

Heterogeneous filaments, methods of producing the same, scaffolds, methods of producing the same, droplets, ... $WO/2017/019300\ (2017)$

https://patentscope.wipo.int/search/en/detail.jsf?docId=WO2017019300

Compositions and Methods for Functionalized Patterning of Tissue Engineering Substrates Including Bioprinting Cell-Laden Constructs for Multicompartment Tissue Chambers. U.S. Patent 12 872,992 (2011) https://www.freepatentsonline.com/y2011/0136162.html

Service

Montefiore Health System, New York City

Collaborator (2016-present) Joined a clinical trial of virtual reality as a non-pharmacological pain management strategy. We collect physiological feedback using wearables to generate immersive experiences that hold promise for guiding pediatric patients towards calmer emotional states.

Cell culture skills: BSL2, human/animal cell lines, microscopy, antibody staining, plate reader assays, bioprinting, bioreactor (rotary, microfluidic, oscillatory compression/relaxation)

Programming skills: Digital reconstruction of medical images (ImageJ, ITK-SNAP), data analysis (Python, MatLab), computer-aided design and manufacturing CAD/CAM (AutoDesk products, SolidWorks, OpenSCAD, PTC Creo), computer nummerical control CNC (G-code)

Prototyping skills: 3D printing, plasma treatment, laser cutting, electrospinning

Education

2009 BS/MS Mech Eng, Drexel University 2014 PhD Mech Eng, Drexel University 2015-17 Postdoc Urban Planning, MIT

Adjunct Faculty

2019 Santa Clara University2021 University of Silicon Valley

Affiliations

Blue Marble Space Institute of Science, Affiliate HISEAS Selene I Mission, Analog Astronaut Quixote Expeditions Antarctica, Guest Scientist World Health Summit, New Voices 2016

Funded Grants - Current Support

- 1. Mycotecture Off Planet. NASA Innovative Advanced Concepts (NIAC) Phase II 2021. Lynn J. Rothschild, Christopher Maurer, Debbie Senesky, Ivan Gláucio Paulino Lima, Jim Head, Jessica Snyder, Maikel Rheinstadter, Martyn Dade-Robertson. \$250k / 2 years
- 2. An Astropharmacy. NASA Innovative Advanced Concepts (NIAC) Phase I 2020. Lynn J. Rothschild (PI), Kate Adamala, David Loftus, Mike Jewett, Jessica Snyder, Ivan Glaucio Paulino Lima, Hans-Joachim Wieden. \$125k / 9 months extended due to pandemic-related closures
